Executive summary

Commissioned by the World Bank, The Caucasus Research Resource Center (CRRC)-Armenia Foundation conducted a representative survey of citizens in Armenia to better understand their awareness, attitudes and perceptions about the coronavirus. The survey specifically focused on the beliefs and behavior of respondents during the pandemic, trust towards public institutions and sources of information, the government's response, future expectations regarding the pandemic, and how the respondents have been financially impacted by the virus. The results of the survey revealed that the public remains significantly concerned regarding the health and economic impacts of the virus. However, there is general approval for the government's response to the virus and the majority of respondents maintain trust in the Armenian healthcare system.

The survey was conducted June 21-29, 2020 and targeted the adult population of Armenia via phone (CATI) using a randomly-generated mobile number list. The final sample included 774 interviews, and post-stratification weight by settlement type, age and gender were introduced based on the latest data provided by the Statistical Committee of the Republic of Armenia.

The coronavirus is currently perceived as the most pressing issue facing the country (36%) followed by unemployment (33%). According to public perception surveys conducted in Armenia before the pandemic, such as The Caucasus Barometer, unemployment has normally been seen as the most critical issue in the country, yet the current public health concerns and widespread economic impacts of the coronavirus have likely contributed to it overtaking unemployment. About half (51%) of respondents believe it is primarily a healthcare crisis while 39% believe it is primarily an economic crisis. Notably, more women (56%) than men (47%) perceive it primarily as a healthcare crisis.

The pandemic has had a significant financial impact on citizens of Armenia. A little more than half (54%) of respondents stated that their financial situation has worsened due to the pandemic. About one third (35%) has either lost their job or received fewer work hours as a result of the virus, and this has impacted their ability to pay for basic needs. To make up for lost income, respondents spend less money on food (36%) and other necessities (43%). A little more than a quarter (28%) have needed to tap into family savings. Among those who do not support further restrictions if coronavirus cases continue to rise, about two thirds (66%) stated economic concerns as the reason. However, there still remains relative optimism about the future economic situation of the country. Thirty percent (30%) of respondents believe their economic situation would remain unchanged 12 months from now while 25% believe it would improve. One third (33%) believe their economic situation would be worse after one year.

Although nearly half of respondents (47%) believe that the virus has spread as a result of people not adhering to anti-pandemic rules, most take preventative measures to help avoid becoming infected by the virus. The vast majority (74%) wears masks and washes their hands more frequently. About half of respondents (57%) believe they are at low risk for catching the virus, and

the primary reason for believing they are at low risk is due to protecting themselves by following preventative measures. Furthermore, nearly half (46%) said their first action after exhibiting symptoms of the virus would be to visit a medical establishment.

Generally there is a significant amount of trust towards Armenian public institutions. The overwhelming majority of respondents maintain trust in the healthcare system (54% “Fully trust”, 27% “Rather trust”) and the Armenian health authorities (42% “Fully trust”, 27% “Rather trust”). The police also maintain a high amount of public trust (43% “Fully trust”, 29% “Rather trust”). However, while domestic institutions maintain a significant degree of public trust, international organizations received less with many more respondents unsure. Regarding sources of information, Armenian TV channels and their online presence were trusted the most while social media was trusted the least.

Armenian citizens largely believe they have a sufficient amount of knowledge about the source of the virus and how to protect themselves from it. Regarding desired information about the virus, about one third (34%) believe they need no further information, and one quarter (25%) would like to know about treatments.

Most respondents approve of the government measures undertaken to mitigate the impacts of the virus. Most believe that the government’s support packages for citizens were either extremely sufficient (19%) or somewhat sufficient (34%). However, despite this majority approval for the government’s support measures, most citizens have not benefitted from any government support with about two thirds (65%) stating that they have benefited from none of the government’s support measures. Most expressed some degree of support for another lockdown if coronavirus cases continued to increase. Among desired government support measures, postponing loan payment obligations received the most responses (27%) followed by subsidizing utility providers for payments (24%).

The pandemic is currently continuing to impact the country contributing to a significant public health and economic crisis. By measuring and analyzing the public’s perceptions, awareness, and attitudes towards the virus including its economic impacts and the government’s response, this report aims to outline the most pressing areas of concern among Armenian citizens. It is expected that this report will be able to inform relevant institutions on how best to address the virus and formulate an effective response to mitigate its effects.

Introduction

In support of the Armenian government's response to protect the population amid the coronavirus outbreak, the World Bank (WB) contracted the Caucasus Research Resource Center-Armenia to conduct a representative survey of citizens in Armenia to better understand their awareness, attitudes and perceptions about the coronavirus, concerns within the context of COVID-19, such as its economic impact and risks of exposure, and support measures to citizens and actions by the government and other actors to alleviate the impact of the coronavirus.

The objective of gathering data was to support the WB's work and engagement related to the pandemic, to help ensure greater impact on the ground, and to evaluate how effectively support projects and programs are delivered, taking into consideration the added clarity and insights from citizens.

The survey was conducted June 21-29, 2020 among the adult population of Armenia via phone using a randomly-generated mobile number list approach. The final sample included 774 interviews and post-stratification weights by settlement type, age and gender were applied based on the latest data provided by the Statistical Committee of the Republic of Armenia.

The "Armenia: Citizens' Perceptions on COVID-19" report first presents the methodology of the conducted research, followed by five parts, addressing the demographic data of the respondents, beliefs, concerns and behavior within the context of the COVID-19 pandemic, trust towards relevant institutions, government actions, and actions in the immediate future.

In addition to the socio-economic and demographic characteristics of the respondents, Part 1 covers the demographic characteristics of the respondents, such as age, settlement type, gender and level of education.

Part 2 encompasses questions regarding whether the respondents lost their job or had reduced hours/income as a result of the pandemic, how respondents make up for lost income, and optimism towards economic prospects. The research shows that around thirty-five percent (35%) of respondents reported losing a job or having reduced hours of work due to the pandemic (Figure 2.4). Forty-three percent (43%) reported spending less on necessities and thirty-six percent (36%) on food (Figure 2.5). About a third of the respondents (30%) said they did not expect their family's economic situation to change in the next twelve months, twenty-four percent (24%) said it would be worse and twenty-one percent (21%) said their economic situation would improve (Figure 2.6).

Part 3 covers how urgent of a problem the respondents thought the coronavirus was for the country, reasons for its prevalence, their level of information about protecting themselves from the virus and individual measures they took to protect themselves, and the need for new information about the virus. The findings illustrate that the coronavirus pandemic was considered the most pressing issue the country faces today (36%) followed by lack of jobs/unemployment (33%) (Figure 3.1). Around half (51%) of the respondents thought the Coronavirus is primarily a healthcare crisis and thirty-nine percent (39%) said it is primarily an economic crisis (Figure 3.2). Close to half (47%)

of the respondents thought the main reason for the prevalence of the virus is because citizens do not adhere to anti-pandemic rules (Figure 3.3). About half of the respondents had a somewhat sufficient level of information about the cause of the virus (51%) and about protecting from it (53%) (Figure 3.4), and close to a third (34%) of the respondents said they needed no further information about it, while a quarter (25%) said they would like to know which treatments are effective, and nineteen percent (19%) would like to know what is the status of the vaccine or a cure (Figure 3.5).

Part 4 focuses in public behavior and health risks within the context of the pandemic and includes questions about the perceived risk of catching the virus, and actions the respondents would take if they were infected. Primarily, about a third of the respondents considered themselves at risk of catching the virus (13% “very high risk” and 21% “somewhat high risk”) (Figure 4.2) from which forty-eight percent (48%) said the risk is high for everyone including themselves (Figure 4.4). More than half of the respondents thought they are at low risk of catching the virus (30% “somewhat low risk” and 27% “very low risk”) (Figure 4.2), from which seventy-one percent (71%) said it was due to protecting themselves and following preventive measures (Figure 4.3).

Part 5 incorporates questions about trust/distrust towards public institutions, international organizations, private institutions, CSOs, media, and other sources of information. Among the most trusted public institutions were the healthcare system (81 %), the Police (71%) and Armenian health authorities (68%), with “fully trust” and “rather trust” responses aggregated (Figure 5.1). Close to half of the respondents trusted the World Health Organization (48%), the Banking system (50%), Employers (33%) and the Armenian Media (31%) to do what is right during the pandemic, with “fully trust” and “rather trust” responses aggregated (Figure 5.2 and 5.3).

Part 6 focuses on the Armenian government’s support packages, their sufficiency, where the government should focus its efforts, which support packages the respondents and their families have benefited from, and what measures the respondents would like the government to undertake to soften the economic impact of the virus on the respondents’ financial situation. Most of the respondents think that the Armenian government’s support packages to citizens are sufficient (53%) (Figure 6.1). Forty-two percent (42%) would like the government to focus efforts on the healthcare system (Figure 6.2). the majority of the respondents (65%) said their family did not receive a government support package (Figure 6.3) and twenty-two percent (22%) said they did not need additional government measures in place to support them (Figure 6.5).

Part 7 covers questions about the immediate future, the respondents’ support for another lockdown, and imposition of new restrictions if there is an upsurge in coronavirus cases. According to the respondents that believed restrictions such as prolonging the quarantine should not be imposed (39%, answers aggregated) (Figure 7.1), about sixty-six percent (66%) said economic considerations should prevail over health considerations (Figure 7.2).

Part 8 covers questions about actions the respondents will take if schools reopen in September. Forty-three percent (43%) of the respondents found it likely (answers aggregated) that schools will reopen in September (Figure 8.1), and about a quarter (21%) of respondents said they would keep their child at home if schools reopen (Figure 8.2).

The report ends with a conclusion and recommendations on continuing monitoring the situation in Armenia, in terms of public perceptions of the virus and institutional responses in order to identify the public's most pressing areas of concern.

Methodology and fielding challenges

The fieldwork for the survey was conducted from June 21-29, 2020 among the adult population of Armenia. The interviews were conducted in Armenian via phone (CATI). A random-generated mobile number list based approach (Random Digit Dialing) was used to contact the potential respondents. The complete list of possible numbers from three mobile providers operating in Armenia was used to generate the random numbers (starting with the following codes: +374 041/ 043/ 055/ 077/ 091/ 093/ 094/ 095/ 096/ 098/ 099). The final sample included 774 interviews (margin of error within 3.5 percent). Post stratification weights by settlement type (capital/urban/rural), age and gender were applied based on the latest data provided by the Statistical Committee of the Republic of Armenia (as of January 2020). The distribution among the phone operators was done proportionate to their shares in the market. Below is the response rate by operators. The average length of the interviews was 17 minutes.

Table 1: Interview attempts

<i>Operator</i>	<i>Total number of calls</i>	<i>Number of unsuccessful calls*</i>	<i>Refusal</i>	<i>Interrupted surveys</i>	<i>Agreement</i>	<i>Respondent reachout rate**</i>	<i>Response rate***</i>
Viva Cell	3113	2157	454	34	468	31%	49%
Veon Armenia/ Beeline	3712	3172	322	10	208	15%	39%
Ucom Armenia	2780	2557	119	6	98	8%	44%
Total	9605	7886	895	50	774	18%	45%

* Including the following instances: number can't be reached, number doesn't exist, number not responding.

** Percent of successful calls from the total number of call attempts.

*** Percent of successful calls from the total number of successful call attempts.

Table 2: Reasons for refusal

<i>Reason for refusal</i>	<i>Number of cases</i>	<i>Percent</i>
Refused to answer	655	73%
Other	108	12%
Respondent is not an adult	103	11%
Respondent can't respond due to illness	19	2%
Respondent doesn't speak the survey language	9	1%
Total	895	100%

The fieldwork personnel consisted of 14 individuals in total which were trained prior to the fieldwork. The enumerators were selected from CRRC-Armenia pool, all of which are experienced and have worked with CRRC-Armenia for several years. All enumerators had previous experience of conducting CATI within CRRC-Armenia. The questionnaire was pre-tested and adjusted based on the pre-test results.

The overall management and quality control of the fieldwork was exercised by the CRRC-Armenia Data Initiative team. The data was monitored on a daily basis and the interviewers were immediately informed of and instructed on issues arising throughout the collection process. The data quality assurance process involved monitoring audio recordings of the calls. Throughout this process around 10 percent of the respondents were checked.

Overall, the fieldwork went smoothly with no major issues. The main challenge was the difference in response rates by mobile service provider (eight percent reachout in the case of Ucom Armenia mobile users).

Part 1. Demographic characteristics of respondents

Close to thirty-six percent (36%) of the respondents were between the ages of 18-35, thirty-three percent (33%) are between the ages of 36-55, and around thirty-one percent (31%) are 56 years old or above.

Close to fifty-five percent (55%) of the respondents were female and forty-five percent (45%) were male. In terms of settlement type, close to twenty-seven percent (27%) of respondents came from urban areas, thirty-six percent (36%) from rural areas and thirty-seven percent (37%) from Yerevan.

1.1 Demographic characteristics (weighted)
n=774

In terms of the level of education of respondents, close to a third (32%) had completed secondary education, thirty-one percent (31%) had completed higher education, and twenty-one percent (21%) had received secondary technical education. Close to six percent (6%) of respondents had received incomplete secondary education and close to five percent (5%) incomplete higher education. Approximately two percent (2%) of respondents had a post-graduate degree.

1.2 What is the highest level of education you received?

n=774

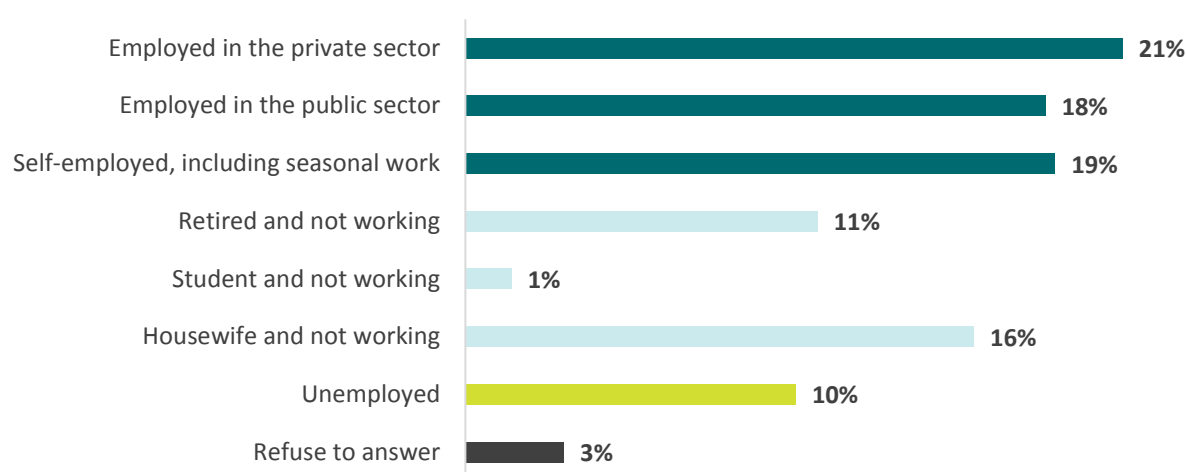

Part 2. Socio-economic characteristics of respondents

About a fifth of the respondents (21%) were employed in the private sector, eighteen percent (18%) in the public sector, and nineteen percent (19%) were self-employed, including seasonal work. Sixteen percent of the respondents (16%) were housewives that did not work, eleven percent (11%) were retirees that did not work, and close to ten percent (10%) were unemployed. Close to one percent (1%) of respondents were students that did not work.

2.1 Which of the following best describes your situation?

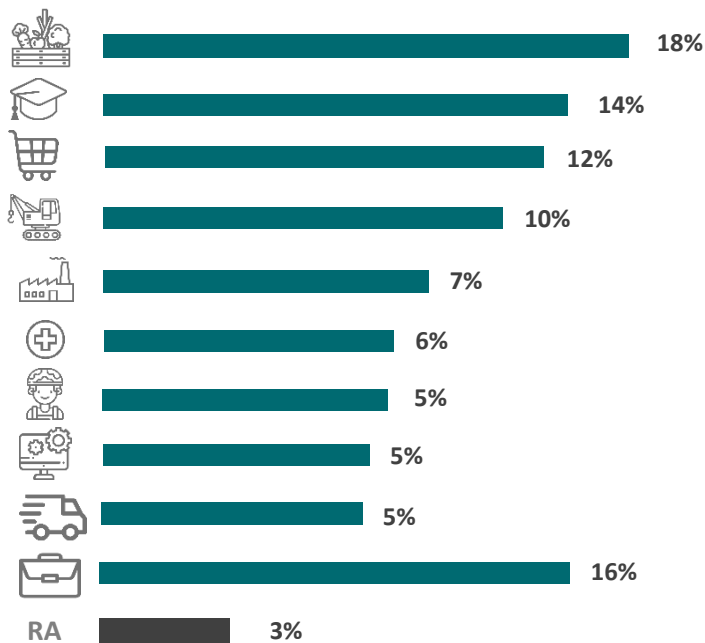

n=774

Almost eighteen percent (18%) of the respondents were employed in “Agriculture, Fishing, Mining”, fourteen percent (14%) in “Education and/or science”, twelve percent (12%) in “Wholesale and Retail Trade” ten percent (10%) in “Construction or utilities” and seven percent (7%) in “Manufacturing”. Six percent (6%) worked in “Health” and close to five percent (5%) of respondents worked in “Information and Communication” and “Transportation and storage” each. Close to three percent (3%) of respondents worked in “Finance or real estate” and “Food Services” each. Less than one percent (1%) worked in “Accommodation”. Around sixteen percent of respondents (16%) worked in “Other” sectors.

2.2 Which sector were you working in?

n=446

Close to a third of the respondents (31%) reported their households having a monthly income between 48.001-120.000 AMD (~98 – 245 USD), around seventeen percent (17%) had an income of 120.001-192.000 AMD (~245 – 394 USD), thirteen percent (13%) had an income between 24.001-48.000 AMD (~49 – 98 USD), and around twelve percent (12%) of the respondents had an income of 192.001-383.000 AMD (~394 – 784 USD). About seven percent (7%) of the respondents had a family income up to 24.000 AMD (~49 USD). Close to three percent of the respondents (3%) reported an income between 383.001-575.000 AMD (~784 – 1178 USD), and around five percent (5%) had an income over 575.001 AMD (~1178 USD). Responses were based on the income after taxes of all family members of the household for the previous month (mid-May to mid-June).

2.3 Taking into account the income of all family members of your household for the previous month, where does the household income fall after taxes?

n=774

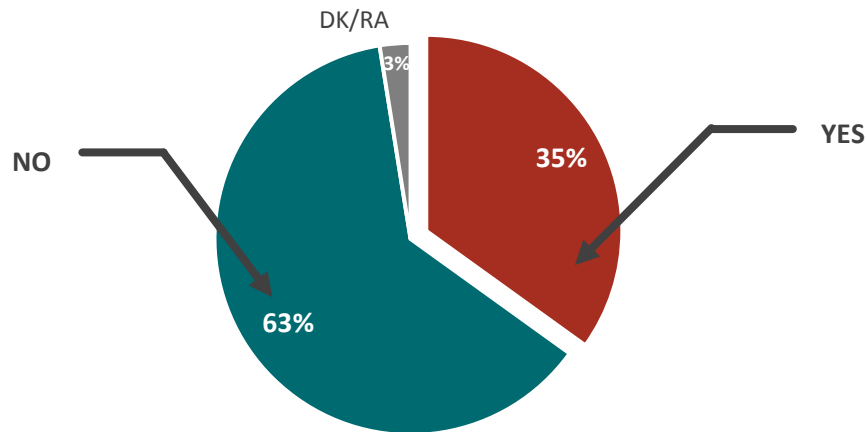

Close to thirty-five per cent (35%) of the respondents either lost their jobs or had a reduction in income due to the pandemic outbreak. However, the majority of respondents (63%) did not experience changes in this regard.

There is a significant difference between men and women in terms of losing a job or reducing income. About forty-five percent (**45%**) of male respondents mentioned they **had lost their job or had reduced hours of work**, while only twenty-seven percent (**27%**) of **women mentioned the same**¹.

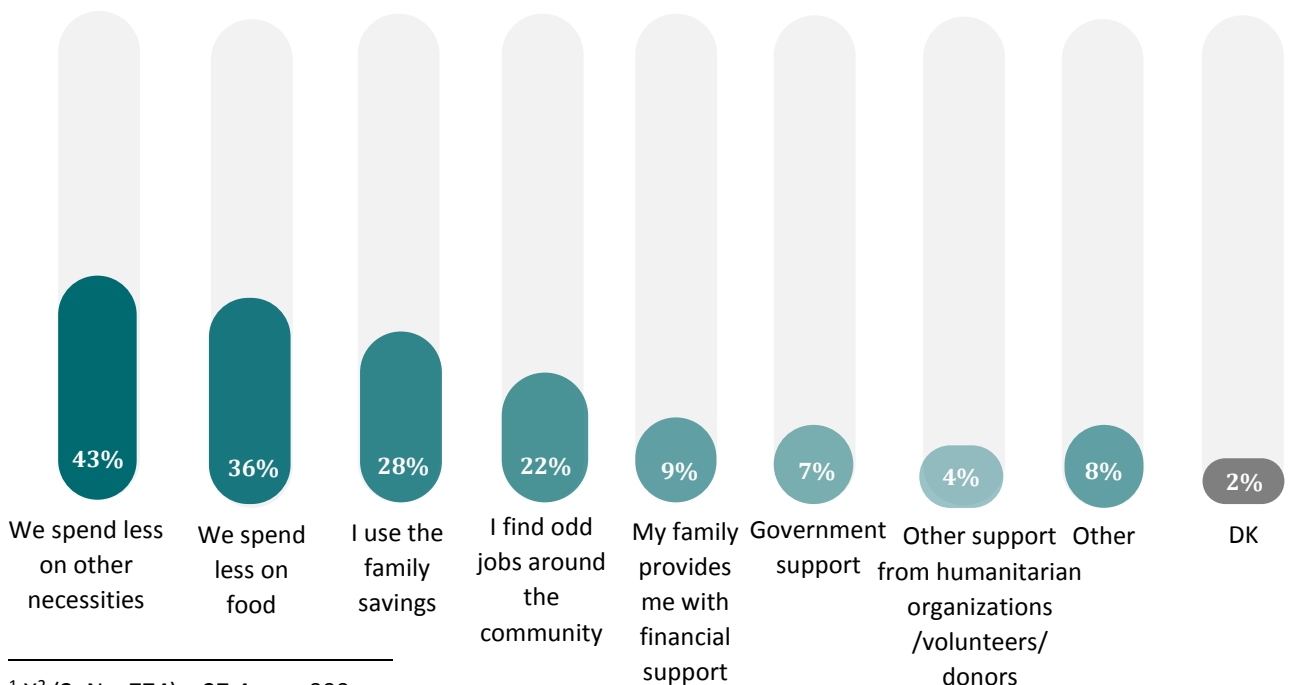

2.4 Have you lost your job or had reduced hours or had reduced income as a result of the pandemic outbreak?

n=774

2.5 Which of the following best describes any way that you have been able to make up for lost income? (Choose all options that apply)

(Respondents choose from a list. Responses combined) Percentage of respondents, n=270

¹ $\chi^2 (2, N = 774) = 27.4, p = .000$

In order to make up for lost income, close to forty-three percent (43%) of the respondents said they spent less on necessities, thirty-six percent (36%) spent less on food and close to twenty-eight percent (28%) relied on family savings. Around nine percent (9%) of respondents relied on the financial support of a family and close to seven percent (7%) on government support. Close to four percent (4%) responded that they received support from humanitarian organizations/volunteers/donors in order to make up for lost income.

2.6 Do you think that in the next 12 months you and your family will be better off or worse off economically than today?
n=774

Close to a third of respondents (30%) believed that they and their family would be in the same economic position in 12 months as they were at the time of the interview. Twenty-four percent (24%) of respondents expected they would be worse off and close to twenty-one percent (21%) believed they would be somewhat better off. Close to nine percent thought that they would be much worse off economically in the coming 12 months (June 2020-June 2021).

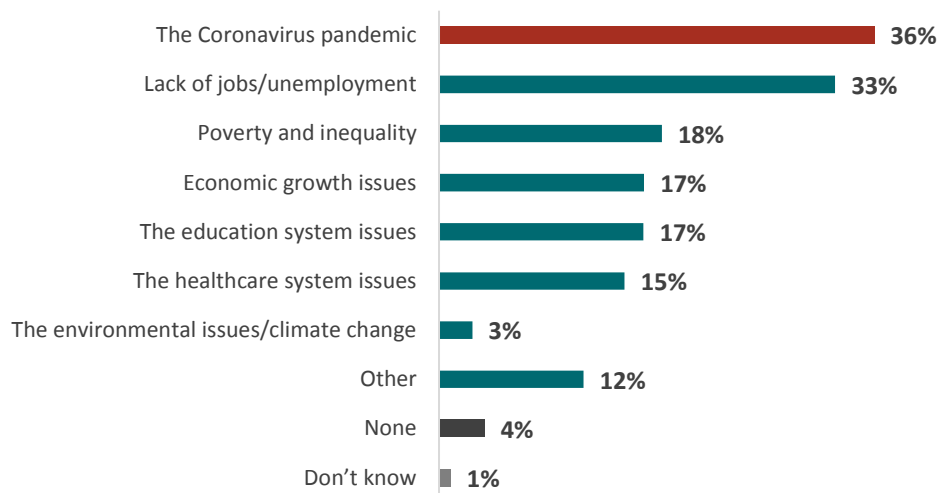

Part 3. Beliefs and concerns within the context of the COVID-19 pandemic

“The coronavirus pandemic” was mentioned by thirty-six percent (36%) of respondents as being the most pressing issue the country faces, followed by “Lack of jobs/unemployment” (33%). Around nineteen percent (19%) of the respondents mentioned “Poverty and inequality” as the issue concerning them the most, and seventeen percent (17%) mentioned “Economic growth issues” and “Education system issues” each. Around fifteen percent (15%) mentioned “Healthcare system issues” as being the most pressing in the country. “Environmental issues/climate change” were mentioned by three percent (3%) of respondents. Four percent (4%) believed there were no pressing issues faced by the country currently.

3.1 When thinking about the most pressing issues that our country faces today, which are the ones that concern you the most? (Choose no more than TWO)

(Respondents choose from a list. Responses combined)

Percentage of respondents, n=774

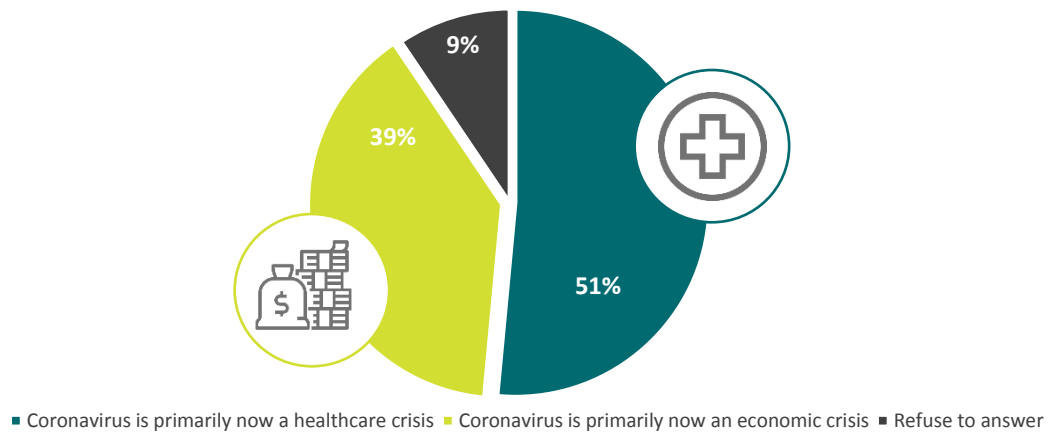

More than half of the respondents (51%) believed that the coronavirus is primarily a healthcare crisis, while thirty-nine percent (39%) responded that it is primarily an economic crisis. There is a significant difference in perceptions around this question between female and male respondents. Particularly, fifty-six percent (56%) of female respondents believe this is primarily healthcare crisis, while only forty-seven percent (47%) of males believe the same¹.

¹ (χ^2 (3, N = 774) = 7.9, p = .046)

3.2 Which one of the following statements best describes your view of coronavirus in Armenia?

n=774

Close to forty-eight percent of respondents (47%) believed that the main reason for the prevalence of the virus was due to citizens not adhering to anti-pandemic rules, such as keeping a distance, wearing masks, gloves, etc. Around twelve percent (12%) found the main reason for the spread of the virus was low levels of hygiene, nine percent (9%) said it was due to “Political/economic competition by world powers”, eight percent (8%) responded that “the existence of coronavirus is a natural phenomenon” and close to six percent (6%) believed “Foreigners have spread the virus”. Around four percent (4%) said “the planet’s environmental situation, for instance climate change” was the main reason for the prevalence of the virus.

3.3 In your opinion, what is the main reason for prevalence of the virus?

n=774

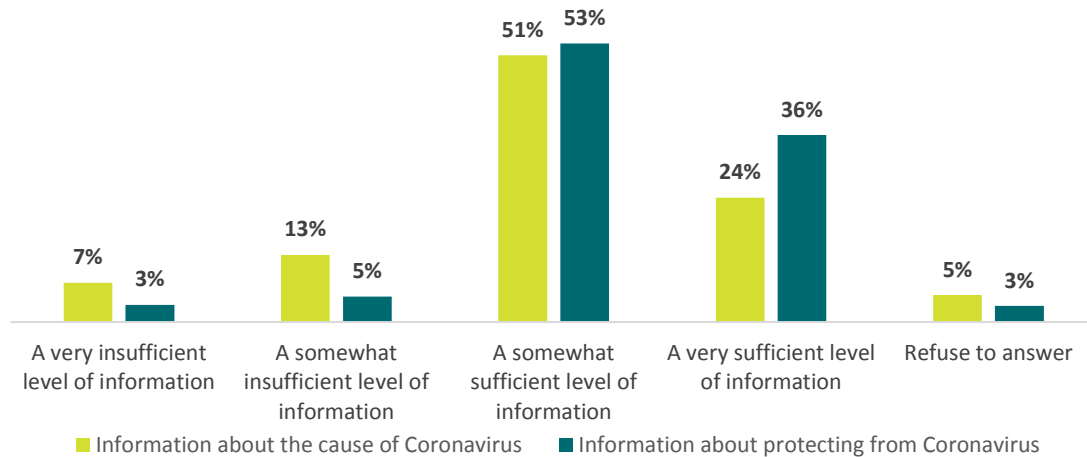

More than half of the respondents mentioned they had a “somewhat sufficient” level of information regarding the cause of the coronavirus (51%) and protection from it (53%). Around thirty-six percent (36%) said they had “very sufficient” information about protecting themselves from the coronavirus, while only twenty-four percent (24%) said the same about the cause of it. More respondents believed they had a “somewhat insufficient” level of information about the cause of the virus (13%) than about protection from it (5%). Only around eight percent (8%) of respondents

believed they had “a very insufficient” level of information about the cause of the coronavirus, and around three percent (3%) about protection from it.

3.4 How would you describe the level of information you have about the cause of coronavirus and how you can protect yourself from coronavirus?

n=774

In terms of additional information about the coronavirus, close to a quarter of respondents (25%) mentioned information about “effective treatments”, about nineteen percent (19%) said they would like more information about “the status of a vaccine or a cure”, and fifteen percent (15%) about “where to go if one is sick”. Under ten percent of respondents mentioned “the cost of treatment for citizens” (9%), “what the government is doing to help citizens” (7%), and “access to government support” (6%). About two percent (2%) responded they would like to know more about “tests, their costs and procedure of testing”. Close to thirty-four percent (34%) of the respondents mentioned they required no further information.

3.5 What more would you like to know about coronavirus? (Choose no more than THREE)

(Respondents choose from a list. Responses combined)

Percentage of respondents, n=774

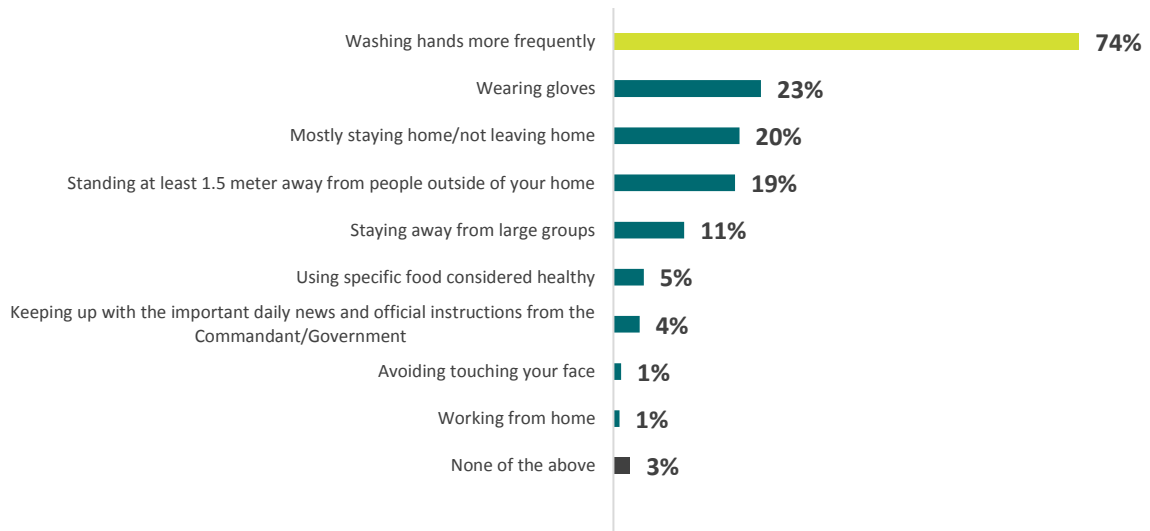

Part 4. Behavior and health risks within the context of the COVID-19 pandemic

“Wearing a mask” and “washing hands more frequently” were the most mentioned responses (74% each) in regards to measures being taken now in response to the coronavirus. About twenty-three percent (23%) of the respondents said “wearing gloves”, twenty percent (20%) said “mostly staying home/not leaving home”, and nineteen percent (19%) said “standing at least 1.5 meters away from people”. Around eleven percent (11%) mentioned “staying away from large groups” as a measure against the coronavirus, five percent (5%) mentioned “using specific food considered healthy” and four percent (4%) said “keeping up with important daily news and official instructions from the Commandant/Government”. Close to one percent said they were “avoiding touching their face” (1%) and were “working from home” (1%).

4.1 What measures, if any, are you consistently taking now in response to the coronavirus? (Choose no more than THREE)

(Respondents choose from a list. Responses combined)

Percentage of respondents, n=774

More than half of the respondents consider themselves at low risk of catching the coronavirus, while 21% believed they are at somewhat high risk and only 13% said they are at a very high risk.

The higher the level of education of the respondent, the higher is the perception that the respondent is at risk of becoming infected with the coronavirus. In particular, **only twenty-four percent (24%) of those that have completed secondary education consider they are under high risk**, while **forty-four percent (44%) of respondents with completed higher education perceive the risk to be very high**¹.

¹ (χ^2 (15, N = 774) = 103.7, p = .000)

4.2 To what extent do you consider yourself at risk of catching Coronavirus?

n=774

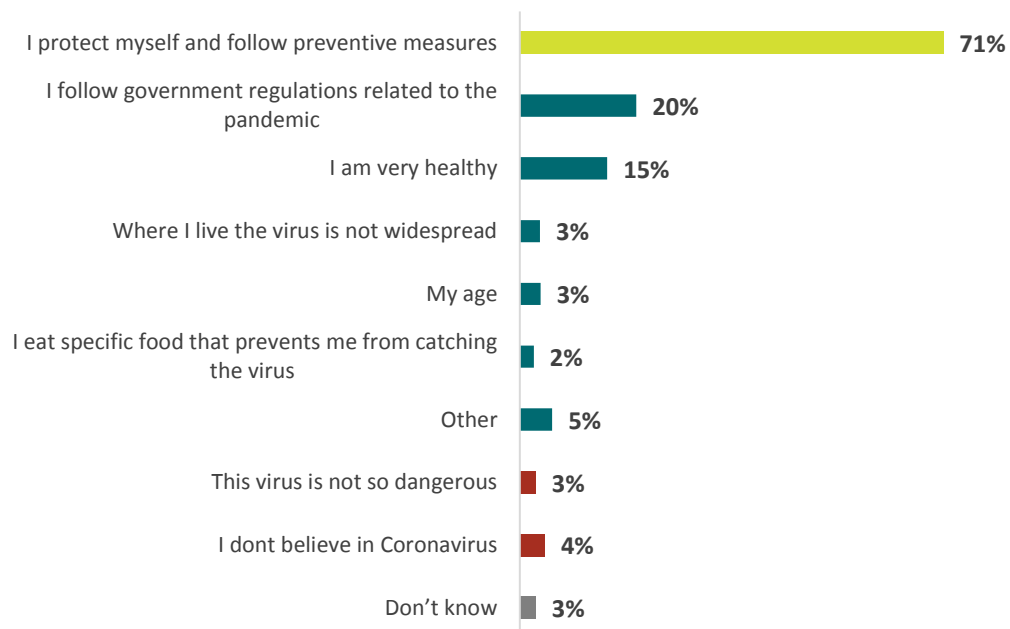

Answering the question why the respondents thought they are at a low risk, the overwhelming majority (71%) mentioned “I protect myself and follow preventive measures”. Close to twenty percent (20%) said “I follow government regulations related to the pandemic”, and fifteen percent (15%) said “I am very healthy”. Close to four percent (4%) thought they are at low risk because of “My age”, three percent (3%) mentioned “Where I live the virus is not widespread” and two percent (2%) mentioned “I eat specific food that prevents me from catching the virus”. Three percent (3%) said “The virus is not dangerous” and four percent (4%) said “I don’t believe in coronavirus”.

4.3 Why do you think you are at a low risk? (Choose all options that apply)

(Respondents choose from a list. Responses combined)

Percentage of respondents, n=442

Forty-eight percent of the respondents (48%) believed they are at a high risk because “The risk is high for everyone including for myself”. About eighteen percent (18%) said it is because “I must go to work” and thirteen percent (13%) said “I have come in contact with people who have contracted the coronavirus”. About twelve percent (12%) mentioned “I am not healthy” for being at a high risk, ten percent (10%) mentioned “My family members leave the house and come in contact with other people” and six percent (6%) said “I go out/I have contact with many people”. Five percent (5%) said “I am in a risk group”, four percent (4%) mentioned “I live in very close quarters with many other people” and about two percent (2%) said “I use public transportation”.

4.4 Why do you think you are at a high risk? (Choose all options that apply)

(Respondents choose from a list. Responses combined)

Percentage of respondents, n=260

About thirty percent (30%) of respondents considered themselves at “somewhat low risk” of getting very sick from the coronavirus, twenty-six percent (26%) said “Very low risk”, fourteen percent (14%) “Somewhat high risk” and around ten percent (10%) considered the risk to be “Very high”. Nineteen percent of the respondents refused to answer the question.

4.5 To what extent do you consider yourself at risk of getting very sick from coronavirus?

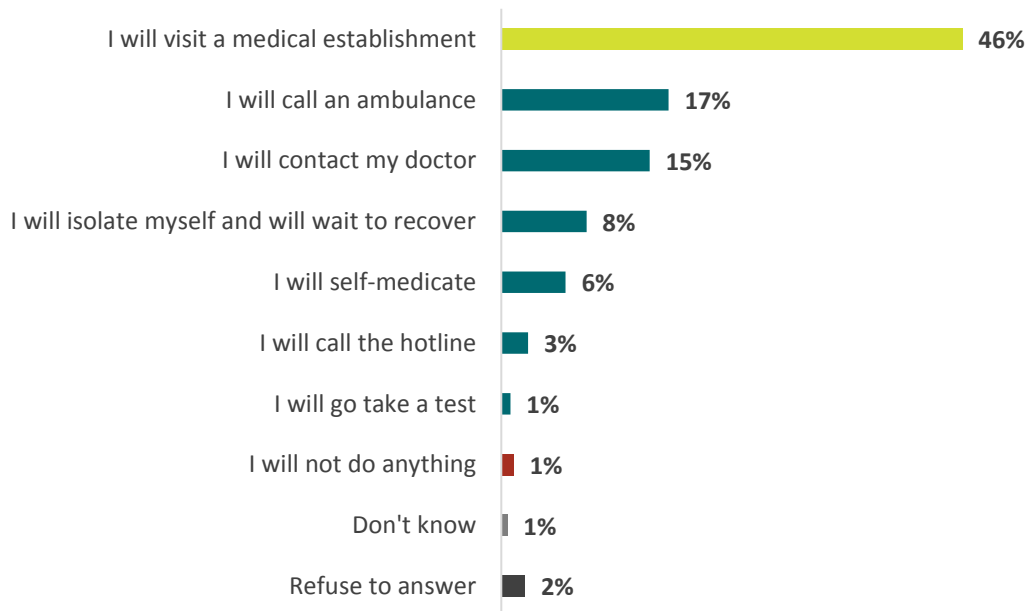

n=774

In the case of having symptoms of coronavirus forty-six percent (46%) of the respondents mentioned “I will visit a medical establishment” as a first action. About seventeen percent (17%) mentioned “I will call an ambulance” and fifteen percent (15%) mentioned “I will contact my doctor”. Close to nine percent (9%) said “I will isolate myself and will wait to recover” as a first action in case of coronavirus symptoms, six percent (6%) said “I will self-medicate” and three percent (3%) mentioned “I will call the hotline”. About one percent of the respondents said “I will go take a test” and “I will not do anything”.

4.6 In the case of having symptoms of coronavirus what would be your first action?

n=774

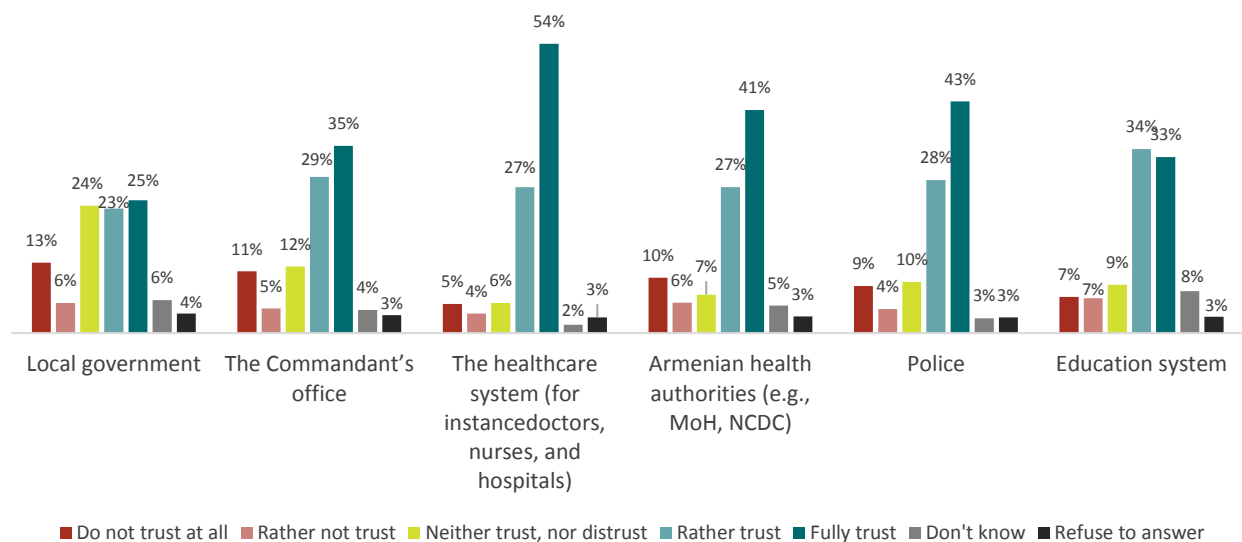

Part 5. Trust towards institutions and information sources

Among public institutions, “The healthcare system” had the most trust (54% “Fully trust”, 27% “Rather trust”) to do what is right during the pandemic, followed by “Police” (43% “Fully trust”, 29% “Rather trust”), “Armenian health Authorities” (42% “Fully trust”, 27% “Rather trust”), “Education system” (33% “Fully trust”, 34% “Rather trust”), “The Commandant’s office” (35% “Fully trust”, 29% “Rather trust”), and lastly “Local government” (25% “Fully trust”, 23% “Rather trust”).

5.1 To what extent do you trust or distrust the following institutions to do what is right during the coronavirus pandemic? Public institutions

n=774

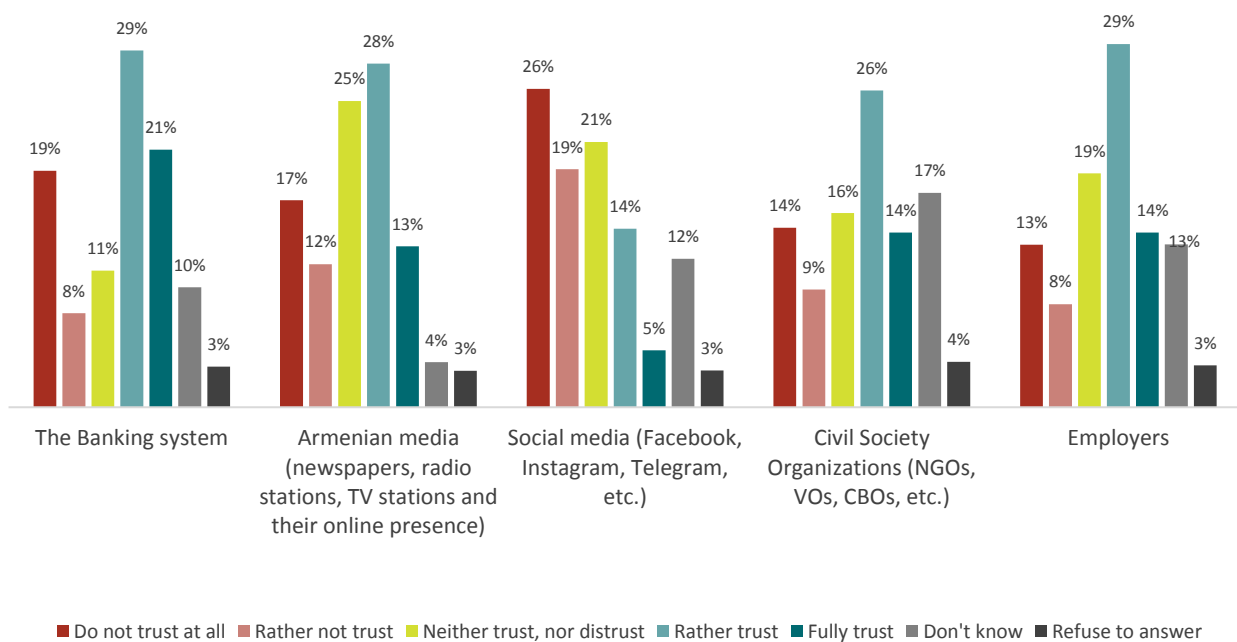

About a fifth of the respondents (25%) fully trusted, and twenty-three percent (23%) rather trusted the World Health Organization (WHO) to do what is right during the pandemic. About ten percent (10%) replied “Neither trust, nor distrust”, close to eight percent (8%) said “Rather not trust” and eleven percent (11%) “Do not trust at all”. Twenty percent of the respondents replied “Don’t know” to trusting or distrusting the WHO to do the right thing during the pandemic. The response “Don’t know” was much higher for international donors (e.g., Asian Development Bank, World Bank, United Nations) at about thirty-two percent (32%). About twelve percent (12%) responded “Fully trust”, twenty-one percent (21%) said “Rather trust” and twelve percent (12%) said “Neither trust, nor distrust”. Close to eight percent (8%) said they “Rather not trust” International donors to do the right thing during the pandemic, and twelve percent (12%) responded “Do not trust at all”.

5.2 To what extent do you trust or distrust the following institutions to do what is right during the coronavirus pandemic? International organizations
n=774

“The Banking system” had the most trust (21% “Fully trust”, 29% “Rather trust”) by respondents to do the right thing during the coronavirus pandemic, followed by “Employers” (14% “Fully trust”, 29% “Rather trust”), “Armenian media” (13% “Fully trust”, 28% “Rather trust”) and “Civil Society Organizations” (26% “Fully trust”, 14% “Rather trust”). Most distrusted was “Social Media” with around twenty-six percent of respondents saying “Do not trust at all” and nineteen percent (19%) saying “Rather not trust”.

5.3 To what extent do you trust or distrust the following institutions to do what is right during the coronavirus pandemic? Private institutions, CSOs, Media
n=774

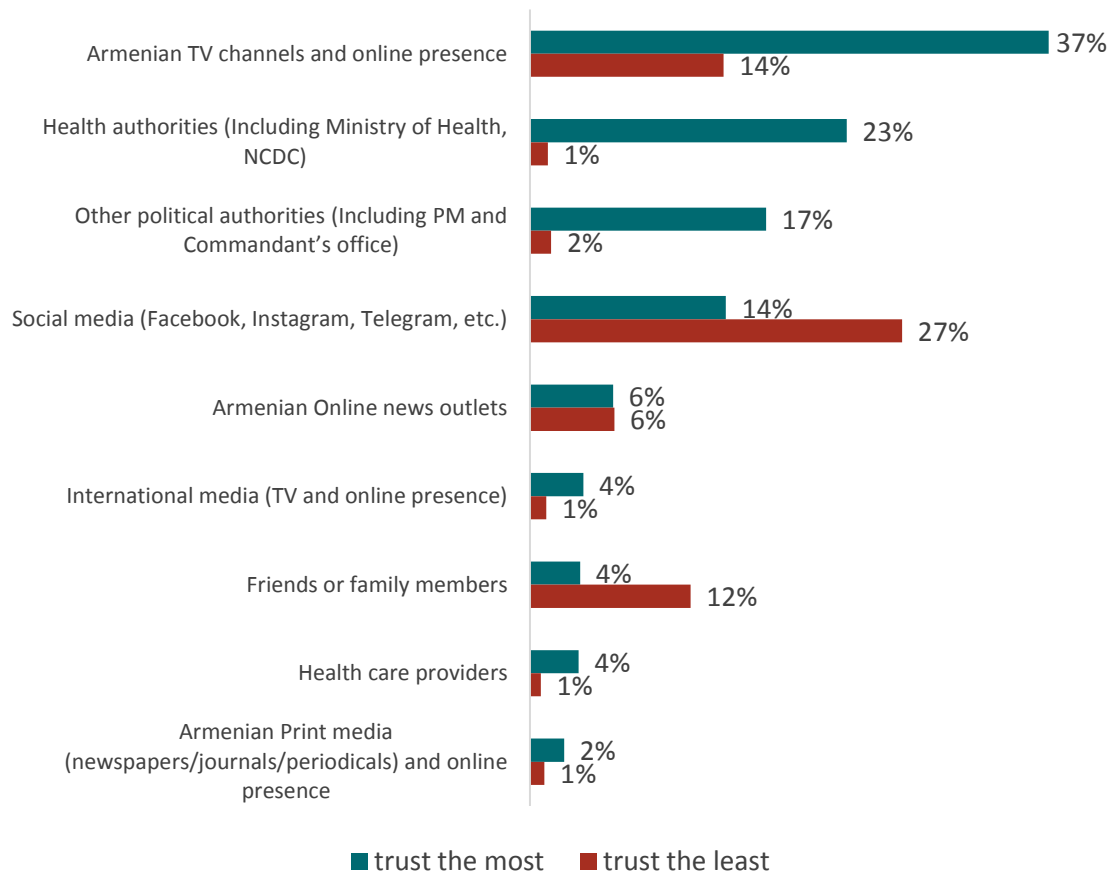

About thirty-seven percent (37%) of respondents mentioned “Armenian TV channels and online presence” as sources for information about coronavirus they trust the most, followed by “health authorities (including MoH, NCDC)” (23%) and “Other political authorities (including PM and Commandant’s office)” (17%).

“Social media (Facebook, Instagram, Telegram, etc.)” was mentioned by twenty-seven percent (27%) of respondents as being trusted the least, followed by “Armenian TV channels and online presence” (14%), and “Friends and family members” (12%).

5.4 Which sources do you trust for information about coronavirus?

n=774

Part 6. Government actions in relation to the coronavirus

About nineteen percent (19%) of respondents believed that the Armenian government's support packages to citizens in response to the coronavirus were "Extremely sufficient", thirty-four percent (34%) believed they were "Somewhat sufficient", fifteen percent (15%) said "Somewhat insufficient" and fourteen percent (14%) said "Fully insufficient".

6.1 To what extent do you think that the Armenian government's packages to citizens in response to coronavirus are sufficient?

n=774

Forty-two percent (42%) of respondents said they would like to see the Armenian government focus most of its efforts on "The healthcare system" in response to the coronavirus. About twenty-two percent (22%) mentioned "Providing direct financial support", eighteen percent (18.2%) said "Poverty and inequality" should be under focus, and sixteen percent (16%) mentioned "Economic growth". "Jobs and employment" and "Strengthening the social safety net" received 13% and 12% each, and "Providing direct non-financial (food, healthcare supplies etc.) support" was mentioned by seven percent (7%) of respondents.

6.2 In which areas would you like to see the Armenian government focus most of its efforts related to the impact of coronavirus? (Choose no more than THREE)

(Respondents choose from a list. Responses combined)

Percentage of respondents, n=774

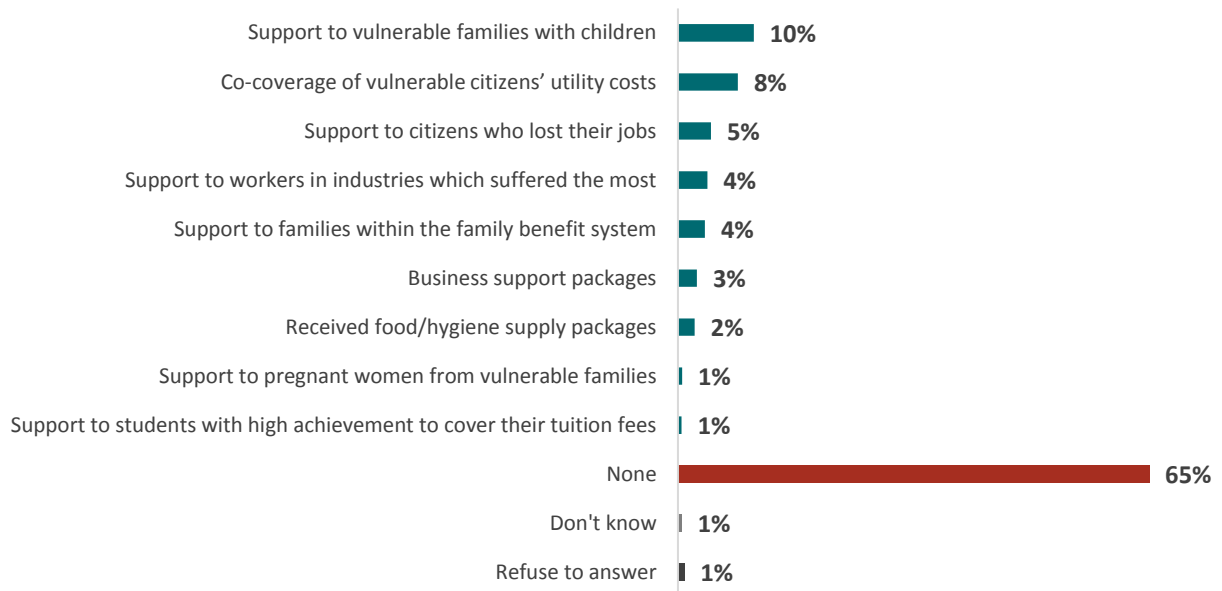

The overwhelming majority of respondents (65%) said that they and their family benefitted from none of the support measures undertaken by the Government to address the social impact of the coronavirus. About ten percent (10%) said they benefitted from “Support to vulnerable families with children”, and eight percent (8.3%) mentioned “Co-coverage of vulnerable citizens’ utility costs”. Under five percent (5%) of respondents mentioned “Support to citizens who lost their jobs”, “Support to workers in industries which suffered the most” and “Support to families within the family benefit system” (4% each), “Business support packages” (3%), “Received food/hygiene supply packages” (2%), and under one percent (1%) mentioned “Support to pregnant women from vulnerable families”, “Support to students with high achievement to cover their tuition fees” and “Support for agricultural activities”.

6.3 Which of the support measures undertaken by the Government to address the social impact of Coronavirus have you or your family benefitted from? (Choose all options that apply)

(Respondents choose from a list. Responses combined)

Percentage of respondents, n=774

More than half of the respondents (54%) mentioned that their personal financial situation was worsened due to the pandemic, while forty-four percent (44%) said it had not.

There is significant difference between age groups. Sixty-one percent (61%) of respondents in the age group under 55 believed that their financial situation had worsened compared to forty percent (40%) of respondents in the 56+ group¹.

6.4 Has your personal financial situation been worsened due to the pandemic?

n=774

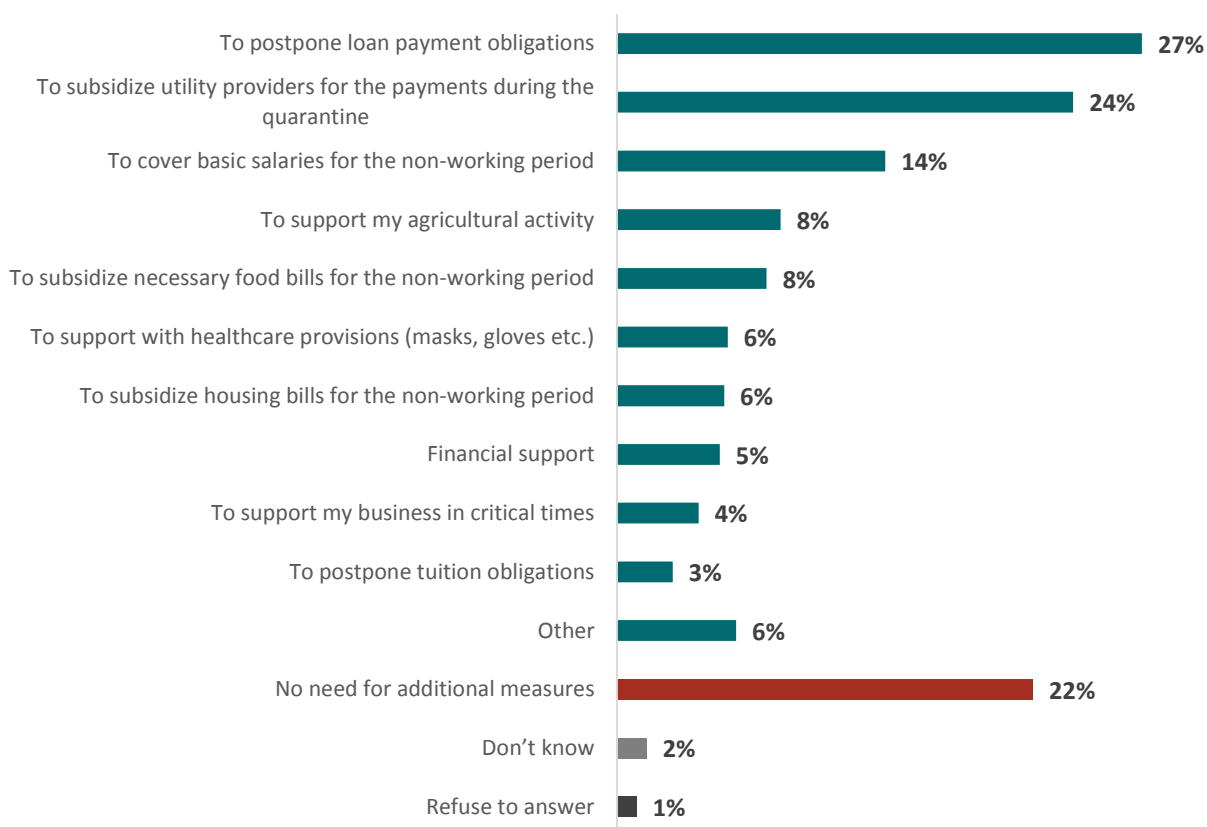

¹ (χ^2 (4, N = 774) = 32.4, p = .000)

About twenty-seven percent (27%) of respondents mentioned they would like “To postpone loan payment obligations” as a measure to cushion the impact of the coronavirus on their financial situation, twenty-three percent (23%) mentioned “To subsidize utility providers for the payments during the quarantine” and fourteen percent (14%) mentioned “To cover basic salaries for the non-working period”. About nine percent (9%) of respondents mentioned “To support my agricultural activity” as a support measure, eight percent (8%) said “To subsidize necessary food bills for the non-working period” and six percent (6%) mentioned “To support with healthcare provisions(masks, gloves, medicine etc.)” and “To subsidize housing bills for the non-working period” each.

6.5 What kind of measures/support would you personally like to have in place by the Government to cushion the impact on your financial situation? (Choose no more than TWO)

(Respondents choose from a list. Responses combined)

Percentage of respondents, n=420

Part 7. COVID-19 pandemic and the immediate future

More than a third of the respondents (34%) would support another lockdown or restriction of mobility “to a very high degree” if the number of people infected with the coronavirus continues to rise significantly in Armenia. About a quarter of the respondents would support restrictions “to a very low degree”, close to a fifth would support “to a somewhat high degree” and around thirteen percent (13%) would support restrictions “to a somewhat low degree”.

7.1 To what extent would you support another lockdown or the imposition of strict mobility rules if the number of pandemic cases continues to rise significantly in Armenia?

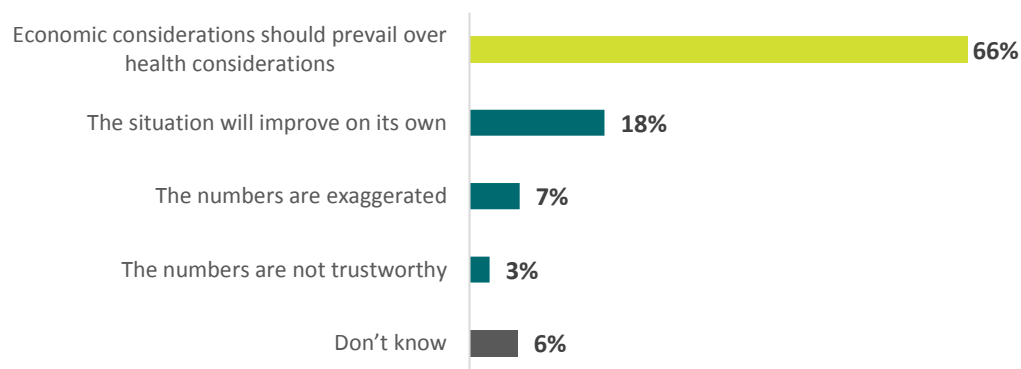

n=774

The overwhelming majority of respondents (66%) that said restrictions should not be imposed even with the increase of new coronavirus cases in Armenia and believed that economic considerations should prevail over health considerations. Close to eighteen percent (18%) said the situation would improve on its own, and around seven percent (7%) said the numbers are exaggerated. Around three percent (3%) believed imposing new restrictions was unnecessary as the numbers of coronavirus cases was not trustworthy.

7.2 Why you do not believe that restrictions should be imposed if there is a reported increase in coronavirus cases in Armenia?

n=300

Part 8. Perceptions of school reopening

Close to 33% percent of respondents believed that it was “somewhat likely” that schools will reopen normally in September. Around 26% said they thought it would “somewhat unlikely” and 15% believed it would be “very unlikely”. Only 11% believed that it was “very likely” schools would reopen normally in the fall.

There is significant difference between age groups. **Respondents in the age group 18-35 believed the most that schools would not reopen normally in September (51%),** while only thirty-six percent (36%) of respondents in the 36+ age group believed the same¹.

8.1 How likely do you believe it is that schools will reopen normally in September?

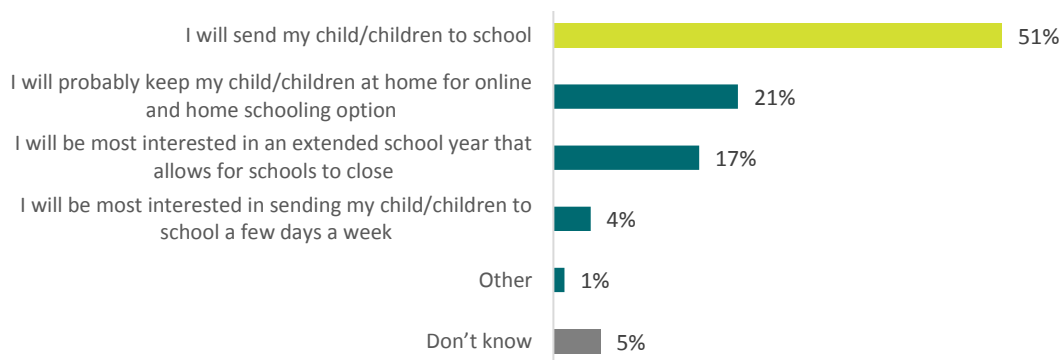

n=774

Slightly more than half of the respondents (51%) said they would “send their child/children to school if classes resume in the fall. About a fifth of the respondents (21%) said they would probably keep their child/children at home for online and home-schooling options. Close to seventeen (17%) said they would be most interested in an extended school year that allows for schools to close. Four percent (4%) said they would be most interested in sending their child/children to school a few days a week.

8.2 Which ONE of the following statements best represents your plans if school does resume in the fall?

n=343

¹ (X² (10, N = 773) = 35.3, p = .000)

Comparative analysis of other survey findings

The most relevant findings of two similar studies are compared with the current one. The “Assessing the level of awareness about the impact of the novel coronavirus in Armenia” online study was conducted by CRRC-Armenia between March 29 and April 8, 2020, containing questions relevant to the current research. The data was collected among residents of the Republic of Armenia and disseminated via Facebook ads¹. In the comparative analysis below, it is important to account for the passage of time between the Facebook study and the current survey, which has impacted the level of awareness among citizens, their perceptions and behavior. Key subjects are underlined below:

First steps in case of having coronavirus symptoms: If exhibiting symptoms of the coronavirus, forty-one percent (41%) of the Facebook survey respondents mentioned they would call the hotline, followed by calling an ambulance (28%), and visiting a medical establishment (11%). In the current report, the first action taken by the respondents would be visiting a medical establishment (46%), calling an ambulance (17%), and contacting their doctor (15%).

Personal measures taken in response for the coronavirus: Ninety-five percent (95%) of the Facebook survey respondents mentioned they washed their hands more frequently (compared to 74% in the current study) and ninety-one percent (91%) mentioned they were staying away from large groups (compared to 11% in the current study) as responses they took to protect themselves from the virus. Sixty-six percent (66%) of the Facebook survey respondents said they wore a mask in response to the coronavirus, versus seventy-four percent (74%) of respondents in the current study.

Sources of information respondents rely on most about the coronavirus: Among Facebook users, the most trusted sources of information regarding the coronavirus were official sources (82%), Armenian TV channels (31%) and Armenian online news outlets (21%). In the current study, thirty-seven percent (37%) trusted Armenian TV channels and online presence, twenty-three percent (23%) trusted health authorities and seventeen percent (17%) trusted other political authorities, such as the PM and Commandant’s office.

Trust towards institutions: Among Facebook study respondents, the healthcare system had the most trust (54% “Fully trust”, 20% “Rather trust”), comparable to the results of the current study (54% “Fully trust”, 27% “Rather trust”). The Commandant’s office had higher trust among Facebook respondents than in the current study (45% “Fully trust”, 21% “Rather trust” versus 35% “Fully trust”, 29% “Rather trust”). Trust towards the police was higher in the current study (43% “Fully trust”, 28% “Rather trust”) than among Facebook respondents (29% “Fully trust”, 22% “Rather trust”).

Attitudes towards the lockdown and state of emergency by the government: Respondents of the Facebook survey in March-April had an overwhelmingly positive attitude towards the entry into force of the state of emergency (78%) and supported the limitation of movement (67%). In addition,

¹ The results cannot be extended to represent the whole population of Armenia or those residents of Armenia using accounts on Facebook. The report is based on the responses of 8427 participants.

sixty-one percent (61%) also mentioned they would fully agree with stricter limitations posed by the state of emergency to prevent the pandemic. In the current survey, only thirty-four percent (34%) of the respondents mentioned they would support another lockdown to a very high degree (20% mentioned “to a somewhat high degree”) while twenty-six percent (26%) mentioned they would support it to a very low degree.

Government measures to cushion the financial impact of the virus: Compared to Facebook survey respondents (6%), twenty-two percent (22%) of the respondents of the current survey mentioned they needed no additional measures by the government to cushion the impact on their financial situation. In the Facebook survey, fifty percent (50%) of the respondents mentioned they would like the government “to cover basic salaries for the non-working period” (versus 14% in the current survey), and forty-five percent (45%) mentioned “to subsidize housing bills and necessary food for the non-working period” versus in the current survey where eight percent (8%) would like the government “to subsidize necessary food bills for the non-working period” and six percent (6%) “to subsidize housing bills for the non-working period”.

The second research relevant to the current study is “Public Opinion Survey: Residents of Armenia” conducted Breavis for the International Republican Institute June 18 - 25, 2020. The data was collected through phone interviews, with respondents selected by random digit dialing (RDD) probability sampling of mobile phone numbers. The sample consisted of 1517 residents of Armenia older than 18.

In the research by Breavis, sixty-five percent (65%) of respondents mentioned their opinion of the police got better in light of the coronavirus, coronavirus, followed by an increase in positive opinions towards the Ministry of Health (64%). About forty-five percent (45%) of the respondents in the Breavis survey mentioned they were very satisfied and twenty-four percent (24%) somewhat satisfied with the Armenian government’s social programs to mitigate the results of the Coronavirus pandemic. Half of the respondents (50%) to the Breavis survey believed the strict measures imposed by the government were justified to protect public health (32% somewhat justified). Almost all of the respondents in the Breavis research (97%) mentioned they wore a mask in response to the threat of the coronavirus, followed by avoiding public gatherings and close proximity to non-household members (90% each) and increased handwashing (84%)¹. In total, thirty-two percent (32%) of the Breavis study respondents were very satisfied with the performance of Armenian mass media, twenty-nine percent (29%) were somewhat satisfied. More than half of the respondents (57%) fully trusted government officials² as a source of information on the coronavirus (23% somewhat trust). Thirty-five percent (35%) found the World Health Organization very trustworthy (24% somewhat trustworthy).

¹ Multiple answers to the question were allowed.

² Formulated as “Government officials (Paretatun)”

Conclusion

This report was prepared for the World Bank in support of its efforts related to the pandemic in Armenia in order to better understand Armenian citizens' awareness, attitudes, and perceptions about the coronavirus including its economic consequences and the impact of government measures aimed at alleviating its effects. The report highlights survey respondents' beliefs, concerns, and behavior within the context of the COVID-19 pandemic, trust towards public institutions, perceptions of the government's response, and expectations regarding the future.

According to the results of the survey, the coronavirus is currently viewed as the most critical issue impacting the country today. In addition to creating a public health crisis, the pandemic has also had a significant economic impact on Armenian citizens. Over half of respondents (54%) stated that their economic situation has worsened since the start of the pandemic, and about one third (35%) stated that they have either lost a job or received less working hours as a result of the virus. This has led to respondents needing to make up for lost income by spending less on basic necessities including food.

Although the survey revealed the significant economic impact of the virus on the Armenian public, it also uncovered majority approval for the government's response to the pandemic as well as a significant trust towards public institutions including the healthcare system and police. However, despite majority approval for the government's support packages (53%), most respondents stated that they have not received any government benefit (65%). Thirty-seven percent (37%) listed Armenian TV channels as the most trusted as a source of information. Furthermore, most respondents (74%) have undertaken preventative measures, such as wearing masks and washing hands more frequently. Nearly half (47%) believe that the virus's spread was caused by those who do not follow such guidelines.

If exhibiting symptoms of the virus, forty-six percent (46%) of respondents stated they will visit a medical establishment. However, according to the National Center for Disease Control, the first action should be calling the medical establishment or hotline. Furthermore, many respondents (25%) expressed a desire to learn more about treatments for the virus. Information campaigns may be able to help communicate appropriate steps for the public regarding what to do when suspecting symptoms of the virus as well as current treatment options. Additionally, there is a ten percent (10%) difference in trust between the healthcare system and health authorities. It may be worth exploring in future research what causes this divergence and how it can be addressed.

As the pandemic continues to impact the health and economy of the country, it will be important to continue monitoring the public's perceptions of the virus and institutional responses in order to identify the public's most pressing areas of concern. Although currently there is relative optimism towards the future economic situation of the country 12 months from now, another surge in virus cases could change this and create new areas of concern for the public.

Annex 1. Frequency tables

1.1 Do you think that in the next 12 months you and your family will be better off or worse off economically than today?		
	Frequency	Percent
Much worse off	69	8.9%
Somewhat worse off	188	24.3%
Same as now	234	30.3%
Somewhat better off	165	21.4%
Much better off	27	3.5%
<i>Don't know</i>	90	11.6%
Total	774	100.0%

1.2 When thinking about the most pressing issues that our country faces today, which are the ones that concern you the most?			
	Frequency	Percent	Percent of cases
The education system issues	131	10.8%	16.9%
The healthcare system issues	119	9.8%	15.4%
Economic growth issues	132	10.9%	17.0%
The Coronavirus pandemic	279	23.1%	36.1%
Poverty and inequality	143	11.8%	18.5%
Lack of jobs/unemployment	254	21.0%	32.8%
The environmental issues/climate change	21	1.8%	2.8%
Other	93	7.7%	12.0%
None	29	2.4%	3.8%
<i>Don't know</i>	8	.6%	1.0%
<i>Refuse to answer</i>	1	.1%	.1%
Total	1210	100.0%	156.4%

2.1 In your opinion, what is the main reason for prevalence of the virus?		
	Frequency	Percent
The planet's environmental situation, for instance climate change	34	4.4%
Political/economic competition by world powers	67	8.7%
The existence of Coronavirus is a natural phenomenon	61	7.9%
Low levels of hygiene	92	11.9%
Foreigners have spread the virus	45	5.8%
Citizens not adhering to anti-pandemic rules (keeping distance, wearing masks, gloves etc.)	366	47.3%
Other	47	6.0%
<i>Don't know</i>	62	8.1%
Total	774	100.0%

2.2 Which one of the following statements best describes your view of Coronavirus in Armenia?		
	Frequency	Percent
Coronavirus is primarily now a healthcare crisis	398	51.4%
Coronavirus is primarily now an economic crisis	302	39.0%
<i>Refuse to answer</i>	73	9.5%
Total	774	100.0%

2.3 If you had to choose, to what extent do you consider yourself at risk of catching Coronavirus? Do you believe that you are at a...		
	Frequency	Percent
Very high risk	101	13.1%
Somewhat high risk	159	20.6%
Somewhat low risk	233	30.1%
Very low risk	209	26.9%
<i>Don't know</i>	2	.2%
<i>Refuse to answer</i>	70	9.1%
Total	774	100.0%

2.4 Why do you think you are at a low risk?			
	Frequency	Percent	Percent of cases
I am very healthy	65	11.3%	14.7%
My age	15	2.7%	3.5%
Where I live the virus is not widespread	15	1.9%	3.3%
I don't believe in Coronavirus	19	2.4%	4.2%
I protect myself and follow preventive measures	314	54.8%	71.1%
I follow government regulations related to the pandemic	86	15.1%	19.6%
This virus is not so dangerous	12	1.5%	2.6%
I eat specific food that prevents me from catching the virus	10	1.8%	2.3%
