POLICY BRIEF

● for Municipality of Ijevan

NATIONAL MULTIDIMENSIONAL POVERTY INDEX

National Multidimensional Poverty Index (MPI) is a country-specific poverty measure tailored to each country's unique situation, building upon the methodology of "Oxford Poverty and Human Development Initiative". This index alters the conventional approach of measuring poverty solely through monetary means. Instead, exploring poverty through 5 dimensions, including (1) basic needs, (2) housing, (3) education, (4) labor, and (5) health, allows a more comprehensive and locally context-specific understanding of poverty. This policy brief summarizes some highlights

from the descriptive analysis of indicators where deprivation level of at least 50% was observed in Lori, Shirak, and Tavush marzes. This is then followed by short- & mid-term and long-term policy recommendations.

KEY RESEARCH INSIGHTS

MPI Dimensions by Indicators

Among the 24 indicators, deprivation is highest in life in dignity, healthy heating, labor market participation and decent jobs. *Share of deprived households on marz level is as follows:*

1. Healthy Food Consumption

Following our analysis of poverty in Lori, Shirak, and Tavush marzes, we noted a deprivation in terms of healthy food consumption exceeding 50%. Surveyed respondents were asked *"In the past 12 months, was there a time when you or others in your household experienced any of the following due to lack of money or other resources?"*. If a person answered **YES** to at least one of the items (*"worried about not having enough food to eat", "were unable to eat healthy and nutritious food", "ate only a few kinds of foods", "had to skip a meal", "ate less than you wanted", "ran out of food", "were hungry but did not eat", "went without eating for a whole day"*), then the household was considered deprived.

The highest level of deprivation in terms of healthy eating is observed in Shirak at marz level, as well as Spitak and rural Shirak at community level.

marz level

community level

2. Affordability of Food

A specific issue is the affordability of food. More than 50% of respondents could not afford having a meal with meat, chicken, fish (or vegetarian equivalent) every second day in all communities surveyed. The highest percentage of such people is observed in Lori. The community with the highest level of deprived people in this regard is Spitak. *Share of deprived households on marz and community levels is as follows:*

3. Hot Running Water

This indicator identifies households that do not have access to functional hot running water. Tavush marz has a deprivation rate exceeding 50%. At community level, the worst situation is observed in rural Tavush where the deprivation rate reaches 63.6%. *Share of deprived households on marz and community levels is as follows:*

RECOMMENDATIONS

1. Recommended actions towards addressing the problem of healthy food consumption

What (short- & mid-term):

1. Subsidize food access at kindergartens and provide a budget for schools to ensure that children are receiving nutritious food. This also allows communities to be aware of healthy eating habits.
2. Initiate community gardening in schools/kindergartens coupled with awareness campaigns on the importance of gardening in the community. This can be a good way to diversify community-based projects (through e.g., public-private partnerships).

What (long-term):

1. Educate communities on healthy eating habits through strengthening and expanding on already existing healthy eating programs.
2. Implement targeted measures to make a healthy lifestyle affordable for those in need.
3. Address these two points into specific social and economic strategic plans and implement the (locally) appropriate measures.

2. Recommended action towards addressing the problem of affordability of food

What (short- & mid-term):

Campaign to promote corporate social responsibility for the Hotel, Restaurants, Cafes (HORECA) sector,

supermarkets, and small shops to provide healthier food with lower price for the selected target vulnerable groups in the communities.

3. Recommended action towards addressing the problem of hot running water

What (long-term):

Set up grant and/or loans programs for households to buy clean and renewable systems for electricity and water heating (boilers, solar panels etc.). Those systems and financing opportunities can either be available for households, group purchase, communities, or at inter-community level. This can be best accomplished through cooperation with the Ministries of Economy and Territorial Administration and Infrastructure as well as the Local state-governments.
